

- Following settings are required to send print jobs from Mac PC to DS Server by using LPR protocols.
 - Windows Server (DS Server)
 - Enable LPD Service (Print and Document Services)
 - Create a shared printer which specifies “SLNX Secure Print Port”.
 - Mac PC
 - Add a printer
 - Set authentication information

Print with LPR Protocols

- Add A Printer

Add a printer with the following settings

- Protocol: Line Printer Daemon-LPD
[Note] Setting is under [IP] tab.
- Address : Enter the IP address or name of the computer sharing the printer
- Queue : Enter the share name of the shared Windows printer

The screenshot shows the 'Add' printer window in macOS System Preferences. The 'IP' tab is selected, and the following settings are configured:

- Address:** 10.61.xxx.xxx
Valid and complete host name or address.
- Protocol:** Line Printer Daemon - LPD
- Queue:** SLNX
Leave blank for default queue.
- Name:** SLNX-LPD
- Location:** (empty)
- Use:** RICOH PS Basic PS

An 'Add' button is located at the bottom right of the window.
